+ E-Commerce / Web Scraping Script Framework + Script Editor with a Syntax Highlighter + Code Samples..lua and.ctm for quick development + Configurable shortcuts + Configuration management + Double-click for editing files + Syntax Highlight for easy reading + Includes standard Lua libraries + Optional English UI Install SigmaScript v0.2.0 on Windows: 1. Run the.exe file 2. Click on "Next" and "Finish" LuaQuant is a neat Lua-powered financial script. How it works: It scans your account files and creates tables of all your accounts. All the information is stored in these tables. The user can then check a given table (or all the tables), view a row, print it, edit a row, calculate, etc. LuaQuant is fully configurable and you can easily add new functions. The Configurator: This application is a tool that can be used to edit the LuaQuant code and make changes to the way it works. It can be used to edit the code of the main program (lua), the plugins, and your own added plugins. You can add functions, change the variables, etc. You can also select the sections of the application that you want to open in your editor. In this way you can edit files that you don't have direct access to. If you want to add a new section, you only need to create a new folder. You can open that folder in your editor. The Configurator is fully compatible with LuaQuant v0.2.0 and higher. (The Configurator has a bug in LuaQuant v0.1.2. If you use this version of LuaQuant, then you can edit the luaroot/script/luatool.lua file to make it work.) You can edit the lua file directly if you have the code you want to edit. LuaQuant install: 1. Install LuaQuant v0.2.0 on Windows or Linux 2. Open the.exe file and run the application 3. Select your account folder, and click on the checkbox "Open files in this directory" PythonCorporation is a simple console application that helps you create Python applications. The PythonCorporation Framework is a simple, but powerful tool to create Python applications with the Lua and Python
