kSar is a simple tool which can graph system activity using sar. It can output the result to a.pdf file which you can then turn into a wall chart or use as an example of how to do this in Java. License: Download Readme for kSar-0.2.0 Prerequisite : You need these to install/run kSar : Linux : tar xvfz kSar-0.2.0.tar.gz Windows : Get the RPM package of kSar: And then follow the installation instructions of the RPM package. 1. Unzip the kSar-0.2.0.tar.gz archive into a directory of your choice. 2. cd to the directory where the unpacked files are. 3. Run the following command to install the jar file tar xvzfz kSar-0.2.0.tar.gz 4. Move the.jar file to a directory on your PATH 5. Type the following: jarsigner -keystore kSar.jks -storepass 1234 kSar.jar 6. The kSar.jar needs to be in the directory where you created the jks keystore 7. Type the following: java -jar kSar.jar Notes: The kSar.jar should be put in the current directory when you run the above command. You can find out how to specify the path to the jks keystore in the README. Run the command kSar> to get a list of available sar specific commands. That's all you need to get started with kSar! Create a new Sar File A new kSar.jar file is created in the same directory as the kSar.jar file. It looks like this: The SarVersion is the version of the sar-command which this java program is based on. If you look at the sar\_command.txt file in the jar, you can see the current sar version in the SarVersion field: The name of the sar binary is part of this program, so you can extract a copy of this sar to a directory with your other sar binaries, so that you can always run it

The language is defined and very easy to learn. How to get the Mac OS X 10.5.8? (some Mac OS X versioning bug): For the sake of simplification, I will use Mac OS X 10.5.8 as example. There will be similar discussions for Mac OS X 10.4 and Mac OS X 10.6. The current version I downloaded the Mac OS X 10.5.8 is OSX10.5.8.dmg. Prepare Mac OS X 10.5.8 ISO image: - Get the Mac OS X 10.5.8 Installer file or disk image and put it in the disk image folder of the version you want to download. In my case, I downloaded the Mac OS X 10.5.8 Installer and put it in the folder ESDownload. - If you downloaded the installer file, you have to make sure it is the correct installer file. Make it bootable disk: - Open the Disk Utility, select the Mac OS X installer disk, click on the Tools button, and select the Open With option. - Click the partition menu button on the left side, and make sure the "Mac OS X Install" is selected. - Click the Erase button and wait a few minutes until the Mac OS X Installer is finished. - Double-click the newly created disk image to mount it. - Mount the OS X Installer disk image. This is the method I used. - Now you can boot from the Mac OS X Installer disk image. Note: If you download the installer, you can make a bootable USB memory stick. It should be similar to the following image. Insert the USB flash drive and restart your Mac OS X. Wait until the Macintosh HD appears. Make sure the disk utility is open. Select the disk image you want to be the Mac OS X Install 77a5ca646e
